

CERA COMPOUND

HIGH END CERAMIC OIL ADDITIVE

DISCRIPTION

CERA COMPOUND is an engine oil additive that exceeds the performance of all existing comparable products by using micro ceramic particles. The micro ceramic particles are very strong solid lubricants, which reduce the coefficient of friction and withstand the highest temperatures and very high pressures. CERA COMPOUND is absolutely safe for the oil filter.

CHARACTERISTICS

- Optimizes power and fuel consumption.
- Exceptional protection when the engine starts cold.
- Extends the life of the engine.
- Reduces engine noise.
- Lower oil consumption.
- Reduced emissions of harmful exhaust gases and CO₂.
- Mixes with all types of engine oil.

APPLICATION

CERA COMPOUND extends the life of the engine and is suitable for all petrol and diesel engines. Optimum results in passenger cars, trucks, motorbikes, boats and industrial engines.

The capacity is suitable for a crankcase capacity of 2,5 to 5 litres.

Contents: 12 x 300 ml/carton
